

# PRO-SET®

## Technical Data **ACE-166** **ACE-262**

The New  
Standard

### **ABSOLUTE CLEAR** **CLEAR COATING EPOXY- FAST**

#### COMBINED FEATURES

Formulated for extremely clear coatings and laminations with carbon and other reinforcement fibers. Commonly used for clear coatings on wood, surfboard laminations and other boardsport products in a production setting. Provides colorless clarity and UV stability. For ultimate long-term UV stability, use with a UV stable topcoat.

**Tack-free time.** ACE-262 hardener provides a tack-free cure time of less than two hours at 85°F (29°C) and just under 3 hours at 72°F (22°C).

**Easy processing.** Optimized for fill coats and hand wet out of lightweight reinforcement fabrics or fibers. Provides an extremely smooth surface when cured<sup>1</sup>. Excellent sandability. Reaches full physical properties at room temperature cure.

**Shelf life** is 3 years for resin and 2 years for hardener when properly stored<sup>2</sup>.

<sup>1</sup>To prevent water spotting, avoid contact with moisture until epoxy is thoroughly cured and top coated.

<sup>2</sup>Store PRO-SET® Epoxy resins and hardeners at room temperature in sealed containers until shortly before use. As with many high-performance epoxy resins, repeated exposure to low temperatures during storage may cause the resin to crystallize. If this occurs, warm the resin to 125°F and stir to dissolve crystals. Hardeners may form carbamation when exposed to CO<sub>2</sub> and moisture in the atmosphere for extended periods of time. Prevent carbamation by protecting hardeners from exposure until immediately prior to processing.

Test specimens were neat epoxy (without fiber reinforcement).

Typical values, not to be construed as specification.
